BarTender

BarTender® 11.4
Cloud flexibility meets unshakable performance for labeling efficiency

BarTender is shaping the future of labeling by combining its trusted software reliability with the flexibility of its cloud solution, delivering new cloud-based capabilities that scale your labeling while strengthening security for maximum performance.

BarTender 11.4 includes additional product enhancements

— Improved local and remote printing for accelerated printing performance

— Expanded PDF printing support for emerging PDF printing applications

— Improved print-time record selection to reduce print operator errors

— Optimized print-time label template proofing for increased print and reprint job accuracy

BarTender OneDriver

Eliminate repetitive label printing steps

- Connect to your network printers by installing once to your server instead of installing multiple printers to the server, cutting new printer setup time in half.

- Immediately start printing from client machines (including via web browser) without having to install their own printer drivers to the server.

- Supports over 95% of printers compatible with BarTender including Zebra, TSC, SATO, GoDEX, and more.

.NET 8 Support

Maximize uptime

- Mitigate service vulnerabilities by running supported business systems that ensure compatibility with future technologies.

BarTender Common Template Library

Simplify regulatory compliance

- Ensure compliance with a single, online library containing the most current label templates, offering over 400 pre-built templates.

- Adapt to new regulatory mandates by receiving new industry-compliant label templates as soon as they're published – no need to wait until the next release.

- Quickly find the label templates you need with modernized UI that allows you to search and filter by standard, industry, and more.

Google Fonts Support

Standardize label templates

- All BarTender products now support Google Fonts

- Ensure label templates are standardized when designing between BarTender products
